Pain Assessment Resources
Introduction and Instructions

“Hello!

We are about to embark on a journey to examine those factors that may be playing havoc with your pain problem. Like a puzzle with missing pieces, the questions you are about to answer will give us clues as to what is aggravating and perhaps even perpetuating your pain problem. Chances are your quality of life and ability to function are not at an acceptable level. Solving the mystery of your pain is important.

I believe that pain can be aggravated by many things including the degree of your tissue damage, the trauma, sleep disturbance, the way others respond to you when you are in pain, your mood, such as depression, anxiety and anger and the ideas and thoughts you have about living with pain.

Your responses to the following questions are intended to help your health care team in developing a treatment plan that is customized to your unique needs. Please consider your “typical” pain when answering these questions rather than your pain at its highest or worst.

Thank you and let us begin.”
